

For this example, we'll use a 5-point rating scale question. The weights assigned to each answer choices are shown in parentheses:

Responsibilities are shared fairly among your team members.

- Strongly Disagree (1)
- Disagree (2)
- Neither Agree nor Disagree (3)
- Agree (4)
- Strongly Agree (5)

After collecting responses to the survey, the results will look something like this.

	Strongly Disagree	Disagree	Neither Agree nor Disagree	Agree	Strongly Agree	Total	Average Rating
Responsibilities are shared fairly among your team members.	20.45% 9	27.27% 12	20.45% 9	11.36% 5	20.45% 9	44	2.84

The average rating of 2.84 indicates that the average sentiment among respondents is that responsibilities are not shared fairly among their team members. The average rating was calculated as follows:

$$\frac{(9*1) + (12*2) + (9*3) + (5*4) + (9*5)}{44}$$

$$125/44 = 2.84$$
